

Badger Class Weekly Overview of Learning

Week beginning 05.11.18

English

This week in English we will be drafting, editing and improving our newspaper articles based around a volcanic eruption.

Maths

Badger class have absolutely smashed column addition so it's time to move on to column subtraction. This week will be tricky but I can't wait to see all the student's progress even further.

Topic / History/ RE

Continuing with our new topic of volcanoes and earthquakes, we will learn about different types of tectonic plate boundaries and understand how these can cause natural disasters. In science we will look at the three types of naturally occurring rocks – sedimentary, igneous and metamorphic.
